HOLD*BLAST™ SURFACE PASSIVATOR DATA SHEET

BENEFIT: As a surface passivator, HOLD*BLAST™ chemically changes the active surface of metal to a much less reactive state. Surface corrosion can occur when water wet surfaces react with atmospheric oxygen. This often results in the formation of flash rust, which can be eliminated with the use of HOLD*BLAST. This product passivates the surface to stop the formation of surface rust for long periods of time, often several days.

DESCRIPTION: HOLD*BLAST™ is a concentrated organic chemistry that is added to water. This biodegradable product does not leave a film or residue to interfere with coating adhesion.
